

Year 5 Class News- Week beginning 20th April 2026

Dear Parents,

Our science topic for this half term is 'Unbalanced forces'. We have learned about the effects of gravity on the earth and drew the planets to scale on the playground. From this we analysed NASA data to see if the bigger the planet, the larger the gravity the planet it has. We learned that it's not the size of the planet that is important but the weight (mass). As Saturn and Jupiter are gaseous planets, they have smaller gravities than other planets even though they are larger.

Here are some photos:

Kind Regards, Mrs Neiland
